Absolute Monocytes Low, High, Normal Range, Blood Test Learn all about absolute monocytes low, high, normal range and blood test. Monocytes are produced in the bone marrow and then enter the blood, where they account for about 1 to 10% of the circulating white blood cells (200 to 600 monocytes per microliter of blood).

### **Absolute Monocytes Low, High, Normal Range, Blood Test**

Monocytes are produced in the bone marrow and then enter the blood, where they account for about 1 to 10% of the circulating white blood cells (200 to 600 monocytes per microliter of blood [0.2 to 0.6 × 10<sup>9</sup> per liter]). After a few hours in the blood, monocytes migrate to tissues (such as spleen, liver, lungs, and bone marrow tissue), where they mature into macrophages.

### **Monocyte Disorders - Blood Disorders - Merck Manuals ...**

The monocyte count in the differential blood test is given as a percentage of the total white blood cell count - this is called relative monocyte count. For example the normal relative monocyte count is 2%-10% of the total white blood cell (WBC) count. The absolute monocyte count is the actual number of monocytes per liter of blood.

### **High or Low Monocytes in Blood Test - What Does It Mean?**

Monocytes, absolute (MO, abs) or percentage (MO, pct) Measures the number or percentage of monocytes, which are white blood cells that move out of the circulating blood and into the tissues, where they mature into macrophages 400-1,000 cells/mcL (abs) 1-10 (pct)

### **Blood Test Results: CBC Explained**

Monocytes (Absolute) A healthy result should fall into the range 0.1 - 0.9 x10<sup>9</sup>/uL, 0.10 - 0.90 abs, or 0.10 - 0.90 x10<sup>9</sup>/L. Monocytes are cells that work in our immune system and thus belong to the white blood cell family.

### **Monocytes (Absolute) - Lab Results explained ...**

This test measures the amount of monocytes in blood. Monocytes are a type of white blood cell (WBC). This test is used to evaluate and manage blood disorders, certain problems with the immune system, and cancers, including monocytic leukemia. This test may also be used to evaluate for the risk of complications after a heart attack.

### **Monocyte count | Allina Health**

The monocytes are integral in the immune system as they help fight certain infections and help other white blood cells eliminate damaged body tissues. They have a distinguishing feature; they have big, kidney-shaped nucleus. Monocytes account for about 2-10% of white blood cells circulating in the blood. (2, 3)
