Charles Darwins On The Origin

On the Origin of Species (or, more completely, On the Origin of Species by Means of Natural Selection, or the Preservation of Favoured Races in the Struggle for Life), published on 24 November 1859, is a work of scientific literature by Charles Darwin which is considered to be the foundation of evolutionary biology.

On the Origin of Species - Wikipedia

Darwin had himself lost the last shreds of his belief in Christianity with the tragic death of his oldest daughter, Annie, from typhoid in 1851. Title page of the 1859 edition of Charles Darwin's On the Origin of Species. Library of Congress, Washington, D.C. (digital file no. 3b16392) Read More on This Topic

Charles Darwin - On the Origin of Species | Britannica

Charles Darwin's theory of evolution by natural selection is the foundation upon which modern evolutionary theory is built. The theory was outlined in Darwin's seminal work On the Origin of Species, published in 1859. Although Victorian England (and the rest of the world) was slow to embrace natural selection as the mechanism that drives evolution, the concept of evolution itself gained widespread traction by the end of Darwin's life.

Charles Darwin | Biography & Facts | Britannica

Darwin was the first to propose the idea of the transmutation of species through the process of natural selection, presenting creation as an ongoing process. His theory was presented from observations made during the voyage of Beagle and subsequent experimentation, influenced by earlier works.

Charles Darwin | Science | The Guardian

On 12 February 1809, Charles Darwin, the bearded Victorian sage on the ten pound note, was born. Many people believe he was the man who discovered we come from monkeys. Yet he did no such thing. Writers before Darwin had made connections between humans and apes and monkeys because of our obvious physical similarities.
