If you have a worn out engine and you have been running 30 weight oil or 40 weight oil, then a multi-viscosity oil will not be reliably thick enough to grease the worn out parts of the engine that are wearing down. The best course of action is to switch to a heavier straight weight oil in order to keep the oil thick enough to fill the gaps.

The engine consists of different components, and the weight of the engine depends largely on the type of car. For a small car, you would expect an engine weight of 150kg/330 pounds, while a large V8 diesel can weigh over 350kg/771 pounds. These weights are minus the transmission, which can push the engine weight of the car down to about 600 pounds.
