The exposure triangle shows the relationship between aperture, shutter speed and ISO settings on your camera. These are the three things that affect the exposure of your image. I know most people just go with the Auto setting when they buy a shiny new DSLR camera and let the camera decide the settings.

### The Exposure Triangle In Photography - Gary Davis Photography

Long exposure is commonly used in night photography. Double exposure: Double exposure, also called multiple exposure, is a technique where the camera shutter opens twice to expose the film to different images. As a result, the photograph combines the two exposures into a single image, which are laid on top of one another.

Long exposures work well for certain types of subjects like seascapes, landscapes, and cityscapes. The key to getting a successful long exposure image is to have something in your image that is perfectly still and something that is moving. Water, clouds, and trees blowing in the wind all work well if the rest of the scene is stationary.
