Fixing Ford Focus overheating problem - "High engine ...

Most PCMs mandate that the engine coolant temperature sensor record temperatures above 160° F within 15 minutes of the engine starting. Additionally, once the 160° F threshold is achieved, the recorded engine temperature must not fall below 160° F during operation. The PCM of your Ford will record if either of these two criteria are not met.

Ford P0128 - Meaning, Causes, Symptoms, & Fixes | FIXD ...

The Ford Focus uses a belt driven water pump to circulate coolant -- a 50/50 mix of water and antifreeze -- through the engine. As the coolant moves through the engine it absorbs heat generated by the combustion process. Heat coolant is released to the air in the radiator as air is pulled across it's cooling fins by the electric fan.

I have a 2010 ford focus. A few weeks ago I notice my heater was acting up. When I let my car warm up in the driveway it was just blowing cold air, however when I started driving down the road it worked fine. I figured maybe my fluid levels were low, not the case. My fluid was fine. About a week later I was driving and I watched the temp gauge go bezerk.
