animals and microbes) and abiotic or non-living (soil, water, light, air, heat, etc.) together constitute next higher level of organisation called ecosystem. Ecosystem is an ecological unit.

Essay: Human Environment and Its Exploitation | Biosphere ...

Biosphere, relatively thin life-supporting stratum of Earth's surface, extending from a few kilometres into the atmosphere to the deep-sea vents of the ocean. The biosphere is a global ecosystem composed of living organisms (biota) and the abiotic (nonliving) factors from which they derive energy and nutrients.

biosphere | Definition, Resources, Cycles, & Facts ...

At the equator: insolation is greater than terrestrial radiation (due to darker forest material and higher land concentration), leading to a surplus in energy. At the polar zones, insolation is weak and terrestrial radiation is high (due to lighter light-reflecting snow + lower land concentration), leading to an energy deficit.

CfE H Geography: Physical Environments - Atmosphere by Mr ...

Biosphere - Biosphere - Environmental conditions: Most organisms are limited to either a terrestrial or an aquatic environment. An organism's ability to tolerate local conditions within its environment further restricts its distribution. One parameter, such as temperature tolerance, may be important in determining the limits of distribution, but often a combination of variables, such as ...

Biosphere - Environmental conditions | Britannica

This highly respected and best-selling textbook provides an accessible, engaging and comprehensive introduction to the major topics within physical geography. It focuses on understanding the inter-linkages between processes, places and environments and is comprehensively illustrated to demonstrate how the physical environment works.
