The Hyundai  $\alpha$ -series (alpha-series) is a multi-valve, four cylinder engine family comprising 1.3, 1.4, 1.5, and 1.6L naturally aspirated versions and a 1.5L turbocharged version. Introduced in 1992, this was Hyundai's first engine designed entirely in-house. Design objectives were to provide high performance and good fuel economy with excellent durability at a reasonable cost.

Although Hyundai uses a single timing belt on its 2.7L V6 engines, its 3.3L, double-overhead camshaft engine is equipped with one timing chain for each camshaft and one drive chain for the oil pump. At first glance, a timing chain design allows engineers to shorten the overall length of the engine and reduce rotating friction.

1) Drain the engine oil. 2) Remove the oil pan (FIG 1). The oil pan has to be removed for the following reasons:. 2.1) The timing chain cover cannot be removed without removing the oil pan first. This is because of the two dowel pins in each side of the timing chain cover that mesh with the oil pan.See FIG 1-B. 2.2) With the oil pan removed, it would be easier to untighten and tighten the bolt ...

The Hyundai  $\beta$ -series engines are 1.6 L to 2.0 L straight-4 built in Ulsan, South Korea.. All  $\beta$ -series engines are dual overhead camshaft valvetrain design. The  $\beta$ -series engine uses a direct-acting overhead cam valvetrain arrangement which places the camshaft in the cylinder head above the pistons and combustion chamber and operates the valve tappets/lifters directly.
