### **Use HDR to improve your photos - Canon UK**

Dynamic Range is the measure of the range of light intensities from shadows to highlights, and HDR photography is a popular technique to create vibrant, powerful photos. To take HDR photos, you need to 'bracket' your exposures, by taking multiple identical images with the exposure altered by approximately 3 stops.

### **How to Create Amazing HDR Images in Lightroom**

Using a tripod to photograph HDR brackets helps keep the frames from shifting between shots. (This image was taken with my iPhone using an Olloclip fisheye lens and processed using Snapseed) This should be a no brainer and I really didn't even want to put it into this article, but alas, here it is.

Use a tripod. One important thing to bear in mind is that when the camera exposes for the darks it drops the shutter speed. In fact a fixed shooting position will always help as the camera will find it much easier to align the exposures if they are very similar in composition. You can create your own HDR image.

### **Use HDR to improve your photos - Canon Middle East**

HDR can also help you produce better images in low-light situations. The setting forces the phone to take shots at the extreme ends of the exposure spectrum rather than focusing on the murky midtones that dominate during dawn and dusk, or in heavily shaded areas. HOW DO I USE IT?
