In Mathematics, linear programming is a method of optimising operations with some constraints. The main objective of linear programming is to maximize or minimize the numerical value. It consists of linear functions which are subjected to the constraints in the form of linear equations or in the form of inequalities.. Linear programming is considered as an important technique which is used to ...

Nine questions in a three-hour closed-book exam would be typical for this course at MIT. We try to cover all the way from  $Ax=0$  (the null space and the special solutions) to projections, determinants, eigenvalues, and even a touch of singular values from the eigenvalues of  $A^T A$ . That is the good matrix of linear algebra: square, symmetric, and positive definite or at least semidefinite.
