This course will introduce the fundamentals of pattern recognition. First, we will focus on generative methods such as those based on Bayes decision theory and related techniques of parameter estimation and density estimation. Next, we will focus on discriminative methods such support vector machines.

Pattern Recognition

Pattern Recognition is the process of distinguishing and segmenting data according to set criteria or by common elements, which is performed by special algorithms. Since pattern recognition enables learning per se and room for further improvement, it is one of the integral elements of machine learning technology.
