WebSphere Application Server (WAS) is built using open standards such as Java EE, XML, and Web Services. It runs on the following platforms: Windows, AIX, Linux, Solaris, IBM i and z/OS. Beginning with Version 6.1 and now into Version 9.0, the open standard specifications are aligned and common across all the platforms.

If you want the WebSM server and WebSphere Application Server to coexist, change the WebSphere Application Server administrative console port to something other than 9090 (for example, 9091). You will need to update the WAS virtualhosts.xml file and the server.xml file. Just change the 9090 in these xml files to a different port number.
